Project 1

Fertile City

Final project under the guidance of Prof. Arch. Eitan Kimmel and Arch. David Robins.

Concept - Mitigating desertification process in the western Negev by using erosion as a design parameter and 3D printing of local soil.

Life span of a 3D printed biocolumn

Year 0
Fabrication

Year 0-2
Planting

Year 2-5
Growth

Year 5-40
Flourish

Year 40-80
Breaking down

Wind diffusing city

City layout

Wall section

Project 2

MyBrix - Mycelium as an organic fusion material.

Experimental design studio under the guidance of Asst. Professor and Arch. Shany Barath and Arch. Avi Cohen.

Concept - using mycelium as a hardend material in order to create biodegradable brix.

Yoav Dabas

Material research & experimentation

Wood waste

Agar-agar

Blue oyster fungus culture

Fabrication through 3D printing

Inoculating the fungus in the paste

Yoav Dabas

Design process

Adjusting the form to the fabrication method

Assembling into a system

Porous facade

Yoav Dabas

Parametric catalog

Project 3

The Reshet - Youth educational complex at Holon

Integrative studio under the guidance of Arch. Shahar Sivan

Concept - Turning modular parts into a playful geometry

Design concept

Searching thoguh slabs a non repetetive pattern

[illegible]

Architectural cross-section drawing of a building facade and roof detail. The drawing shows the transition from an interior room (פנים) to an exterior wall (חוץ) and roof. Key components include a concrete slab (87), insulation (25), a metal deck (12), and a parapet wall (18). The roof is finished with a waterproofing layer (15) and a gravel layer (14). A drainage system is shown with a pipe (20) and a downspout (31). The drawing is labeled with dimensions and material specifications in Hebrew.

Labels (Hebrew):

- לוחות במבוק
- קורת OSB
- יריעה ביטומנית
- ניקוז מים
- אפורים
- פוליסטירן
- מוקצץ
- בטון יצוק
- במקום
- בטון חשוף
- בורג מתרחב
- שקע סבועי
- ממתכת
- כבל פלדה
- פרופיל
- אלומיניום שקוע
- פוליאסטר
- דחוס
- גוף תאורה
- תלוי - ציפוי
- נחושת
- פנים
- חוץ
- זכוכית כפולה
- פרופיל אלומיניום L 8X10
- מסמר פלדה
- בטון יצוק במקום
- פוליסטירן מוקצץ
- יורפאל - פייבר צמנט
- קורת פלדה I 35X20
- פתח ניקוז
- עמוד פלדה
- מצפה 15X15
- פלסת פלדה
- פרופיל
- אלומיניום שקוע
- קיר מסך
- חיבור עמוד
- בריתוך
- מסמר פלדה
- פוליסטירן מוקצץ
- לוח צמנט
- פרופיל
- אלומיניום שקוע
- קורת פלדה I 20X40
- בורג פלדה
- קורת פלדה I 20X40
- בורג נפתח

Group Research

WoodenWood, WoodenWood2

2 project that were executed under the guidance of Prop.Asst. Shany Barath, at Distrutive.Design Lab (D.D.Lab) at the Architecture and Town planning faculty in the Technion, Israel. Members of the group: Avraham Cohen, Alon Nisan, Yuval Berger, Yoav Dabas and Shany Barath.

The research focused on creating high-end design objects with “low” material - wood waste, through additive manufacturing. As a part of that research two projects on different scale and different program was executed and were presented in varius exhibisions in Italy and Jerusalem, and on plenty of web exehibitions online.

The follow materials made by the group.

Yoav Dabas

Thank you
